Tremor measurements

Name: Dana Levi Age: 72 Period: Jul 13, 2026 – Oct 10, 2026

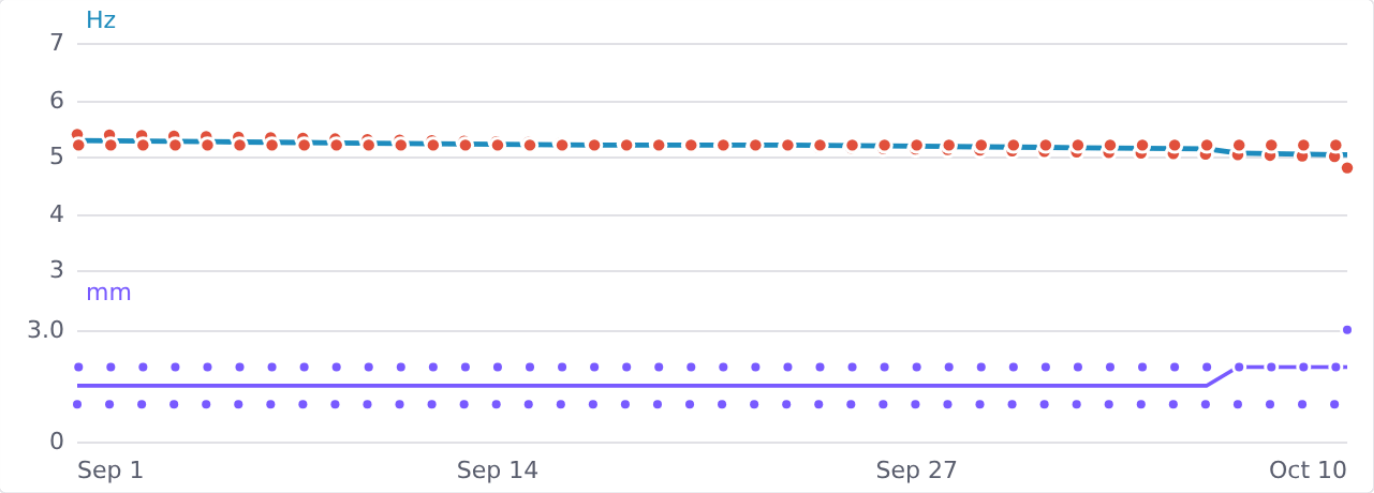

103 measurements, 1 spiral drawings

Made Oct 10, 2026, 6:00 PM with Tremorti (phone motion sensor, camera or touch screen).

Median values by condition and side

Condition	Side	n	Rate (Hz)	Size (mm)
Hand, at rest	left	41	5.2	1.0
Hand, at rest	right	40	5.2	2.0
Hand, held out	left	8	7.0	0.30
Hand, held out	right	13	5.0	1.3
Leg, standing	not set	1	15.0	0.20

Trend: Hand, at rest, motion sensor

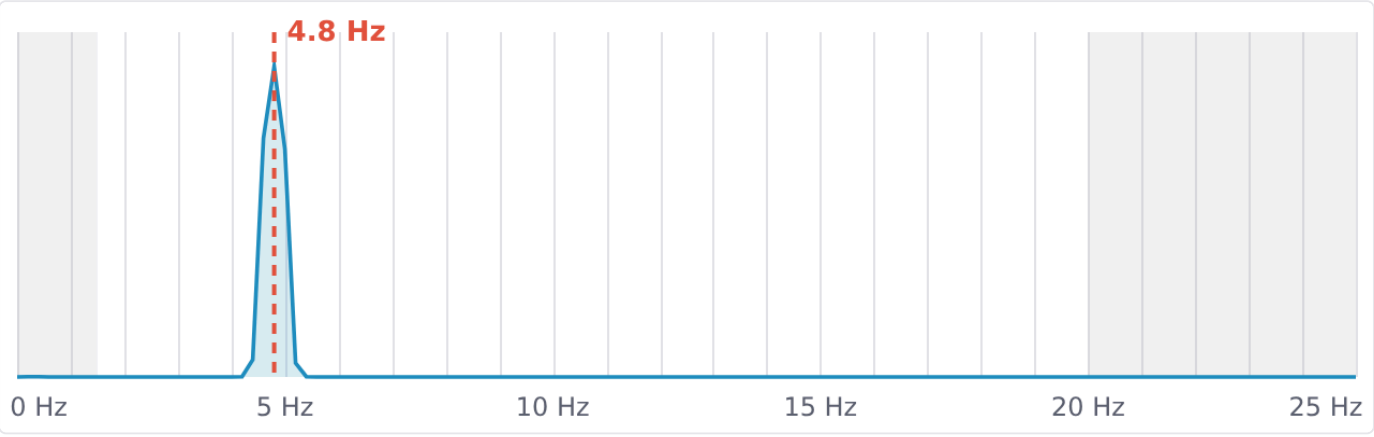

Before / after medication

After medication your tremor size was on average 35% smaller in 6 paired measurements. Rate: 5.0 Hz before, 4.8 Hz after (averages). A pattern in your own measurements, not proof of how well a medicine works.

Left vs right (Hand, at rest, motion sensor)

The right side: size about 2.0× the other side (medians of 41 left and 40 right measurements).

Latest spectrum: Oct 10, 2026, Hand, at rest, motion sensor, left side

Pattern match (latest reading with a rhythm)

4.8 Hz, Hand, at rest, motion sensor, left side: resembles Parkinsonian rest tremor (close match), Functional tremor (weak match), Dystonic tremor (weak match).

Spiral drawings

1 drawing(s); latest Oct 8, 2026: score 3.4/10, 6.1 Hz, ≈ 1.8 mm.

Not a diagnosis. Phone measurements for following changes over time; sizes are approximate and depend on how the phone was held. Please interpret together with a clinical examination.
